AI FUTURE OLYMPIAD (AIFO) STUDENT GUIDE GRADES 5–6 UNDERSTANDING AI AROUND US

LEARN • EXPLORE • TRY • THINK

Discover the AI that is already part of your everyday life!

No coding required

WELCOME!

AI may sound like something from the future, but you may already use it every day!

- 🗺️ Use a map to find a route
- 🎬 Watch recommended videos
- 🎤 Talk to a voice assistant
- 📸 Use smart camera features
- 🎮 Play certain digital games

In this guide, you will learn about AI through **simple examples, activities and questions.**

BY THE END, YOU SHOULD BE ABLE TO:

- Understand what AI means
- Recognise AI around you
- Understand some differences between humans and machines
- Understand that AI can make mistakes
- Use AI safely and responsibly

AIFO LEARNING JOURNEY

LEARN → TRY → PRACTICE → THINK

WHAT IS ARTIFICIAL INTELLIGENCE?

Artificial Intelligence (AI) is technology that allows computers or machines to perform tasks that can involve recognising patterns, responding to information or making predictions.

You don't need to know coding to understand AI.

AI CAN BE FOUND IN:

- 🗺️ **Maps**
- 🎬 **Video recommendations**
- 🎤 **Voice assistants**
- 📱 **Smartphone features**
- 🎮 **Some games**

⭐ QUICK CHECK

Which one is most likely to use AI?

1. Pencil
2. Voice assistant
3. Notebook
4. Water bottle

My answer: _____

WHERE DO WE SEE AI?

🗺️ MAPS

A map app can suggest routes and estimate travel time.

🎬 VIDEO RECOMMENDATIONS

A platform may suggest videos based on activity or interests.

🎤 VOICE ASSISTANTS

Voice assistants can respond to spoken questions or commands.

📸 SMART CAMERA FEATURES

Some camera systems can recognise faces, objects or scenes.

🎮 GAMES

Some games use systems that respond to what players do.

💡 YOUR TURN!

Write **three examples of technology you use** hat might involve AI.

1. _____
2. _____
3. _____

ARE HUMANS AND MACHINES THE SAME?

Machines can do many useful things, but humans and machines are different.

❤️ HUMANS CAN:

- Feel emotions
- Imagine
- Make judgments
- Have experiences
- Understand situations in many different ways

⚙️ MACHINES CAN:

- Process information
- Find patterns
- Make predictions
- Follow instructions
- Process information quickly

💭 THINK!

If a computer gives an answer, does that automatically mean it is correct?

YES / NO

Why?

CAN MACHINES THINK LIKE HUMANS?

AI systems can perform tasks that may look intelligent.

For example, an AI system may:

- Recognise an image
- Answer a question
- Recommend a video
- Recognise speech

But machines do not experience the world in exactly the same way people do.

⭐

REMEMBER

AI can perform intelligent-looking tasks without being the same as a human.

💬 DISCUSS

If an AI can answer questions, does that mean it has feelings?

What do you think?

HOW CAN AI LEARN?

Some AI systems use **examples to identify patterns.**

Imagine showing a system lots of examples of:

🐱 **Cats**

🐶 **Dogs**

The system can use patterns in those examples to make a prediction about a new picture.

⚠️ BUT HERE'S THE IMPORTANT PART:

If the examples are poor, confusing or incomplete, the prediction may also be wrong.

🎯 TRY IT!

Your teacher gives you a few examples.

Look carefully.

Can you find the pattern?

My prediction:

AI IS NOT PERFECT

AI can sometimes:

- Misunderstand information
- Give an incomplete answer
- Make a wrong prediction
- Produce an answer that sounds correct but isn't

⭐ THE AIFO RULE

STOP → CHECK → THINK

01

🛑 STOP

Don't immediately believe the answer.

02

🔎 CHECK

Look for reliable information.

03

🧠 THINK

Ask yourself whether the answer makes sense.

💭 MINI SCENARIO

An AI gives you an answer about something important.

Would you immediately trust it?

YES / NO

Why?

BE A RESPONSIBLE AI USER

🔒 Protect Private Information

Don't share passwords or sensitive personal information.

🧠 Keep Thinking

AI should help you learn, not do all your thinking for you.

✅ Check Important Information

Especially when the information really matters.

🤝 Be Respectful

Don't use technology to trick, hurt or misuse information about others.

⭐ REMEMBER

SMART TECHNOLOGY NEEDS SMART USERS.

Quick Challenge

Write **one rule** you think every student should follow when using AI.

ACTIVITY + PRACTICE

ACTIVITY 1 — IS IT AI?

Your teacher will give you different examples.

Decide:

🟢 **AI**

🔵 **NOT AI**

🟡 **NOT SURE**

Then explain your choice.

ACTIVITY 2 — RECOMMENDATION DETECTIVE 🔎

Imagine two students:

Student A: watches football videos.

Student B: watches drawing tutorials.

Question:

Would they necessarily receive the same recommendations?

YES / NO

Why?

AIFO QUICK PRACTICE

1. What does AI stand for?
2. Name one example of AI you use.
3. Can AI make mistakes? **YES / NO**
4. What should you do before trusting an important AI answer?
5. Which is safer? **A.** Share your password with an AI **B.** Keep private information private
   Answer: _____
6. Name one responsible way to use AI.

🌟 FINAL THOUGHT

One thing I learned today:
